

Rad-hard FPGA-based edge computing for satellite telemetry processing and secure command-and-control in defense and space critical infrastructure.

Defense × Critical infrastructure monitoring × Edge computing · OS119 v2 · refreshed 2026-08-20

ATTRACTIVENESS	RIGHT TO WIN	COMPETITION	SERVICEABLE MARKET	HORIZON	PORTFOLIO
80 is the world moving	51 can we play, can we win	HIGH 1 named in the evidence	€46.9m observed evidence · per year	LATER research and standards activi...	L1 38 signals

Attractiveness and right to win are scored and displayed separately and are never combined (SC-12). Competition is a fourth quantity, not a discount on either.

Evidence gap (SC-13). Orange has 0.0 published reference(s) in Defense, below the threshold of 5. A customer conversation here has no proof point behind it yet.

The opportunity

This opportunity is about deploying rad-hard FPGA-based edge computing systems for satellite telemetry processing and secure command-and-control in defense and space critical infrastructure. It targets defense agencies and space operators who need to process data at the edge with low latency and high security, and it exists now because of the convergence of edge computing maturity, cybersecurity threats to critical infrastructure, and the push for sovereign, trusted solutions.

Market opportunity

Method	Total (TAM)	Serviceable (SAM)	Obtainable (SOM)	Confidence
Observed: tendered contract value, annualised	€46.9m	€46.9m	€563k	observed

All figures are annual, in EUR. Ranges compound the uncertainty of each factor below; the base case is the middle column of each.

Observed: tendered contract value, annualised

Factor	Value	Basis	Source	As of
Tendered contract value in matching CPV categories	€46.9m per year	observed	TED (Tenders Electronic Daily) · ted	2026-05-19..2026-08-07
Assumed obtainable share of the serviceable market	1.2 % of SAM	assumption	config/sizing.yaml · obtainable_share	size-2026-08-a

Read this before quoting the number. Observed over 90 days of TED coverage and scaled to a year (x4.1); a short collection window makes that scaling rough. 9 matching notices, matched on use case via the CPV crosswalk — §4.5.2's warning applies: a crosswalk error lands directly in this number. Public procurement only. Private-sector demand for the same capability is not visible here at all, so this is a floor rather than a market size.

The solution, in one picture

Secure Edge for Satellite Telemetry

This diagram shows how Orange integrates secure connectivity, edge computing, and AI analytics to enable real-time, secure satellite telemetry processing.

Boxes marked as Orange assets are validated against the linked business graph; a box the model claimed for Orange without a matching asset is shown as third party.

What has changed

Edge computing is becoming a critical architectural shift in telecommunications, distributing computational resources to meet the demands of ultra-reliable low-latency communications and pervasive connectivity. Cyber attackers are increasingly targeting industrial control systems that manage critical infrastructure such as energy, water, and oil, and a holistic countermeasure approach is needed. EU-funded projects are strengthening the resilience of critical infrastructure through edge computing and AI-driven anomaly detection, highlighting the strategic importance of this area.

Sources: SIG-46C2C121668E International Journal 2026-05-29; SIG-0CB746316F44 International Journal 2026-05-21; SIG-F292FB8C24B6 cordis.europa.eu 2025-09-01

Who buys, and why now

The buyer is typically a defense procurement officer or a space agency program manager, while the operational pain is felt by satellite operations teams and cybersecurity analysts who must ensure continuous, secure telemetry processing. The trigger is often a security incident or a mandate to modernize legacy ground systems, pushing them to adopt edge computing to reduce latency and improve resilience.

Why it is hot now — every claim bound to a dated source

- EU-funded project strengthens resilience and security of critical infrastructure via edge computing and AI. [SIG-F292FB8C24B6]
- QuickLogic is targeting defense and space growth with rad-hard FPGA push [SIG-338F7169B796]

What Orange would deliver, and why it can win

What Orange would deliver

Orange would assemble a solution leveraging its Private mobile networks for secure, low-latency connectivity, Orange Drone Guardian for aerial surveillance and edge deployment, and its Cybersecurity experts to ensure end-to-end security. The engagement would start with a security assessment and architecture design, then deploy edge computing nodes with AI-driven analytics, and finally integrate with existing satellite ground systems, all certified to ISO 27001 and SecNumCloud standards.

Why Orange can win

Orange can win because it combines trusted connectivity (Private mobile networks), cybersecurity expertise, and sovereign certifications (SecNumCloud) that are critical for defense and space customers. Its Orange Drone Guardian adds a unique aerial edge capability. However, the specific rad-hard FPGA technology is not an Orange asset, so Orange would need to partner with a specialist, which could dilute its differentiation.

Named assets behind this — each individually inspectable (LK-08)

Competitive landscape

HIGH competitive intensity (score 8.3; 1 of 8 listed players appear in this topic's own evidence)

Crowded, with heavyweight incumbents already visible in the evidence. Win on a specific differentiator or do not bid.

Competitors include AWS, which is strong in edge computing and hyperscale cloud; Deutsche Telekom/T-Systems and Lumen Technologies, both strong in connectivity and cybersecurity; NTT DATA and Atos/Eviden, strong in systems integration and defense; Schneider Electric, strong in industrial OT; and HPE and Nokia, strong in network equipment. Each will frame the comparison around their existing strengths, so Orange must emphasize its unique combination of sovereign, secure, and integrated offerings.

Sources: SIG-701F806B6A7A International Journal 2025-07-30

Competitor	Category	Position here	Basis	Evidence
AWS	Hyperscaler	sells Edge computing — also an Orange partner	evidenced	SIG-701F806B6A7A
Deutsche Telekom / T-Systems	Telecom operator peer	sells Edge computing; competes in Connectivity Solutions, Cybersecurity	structural	—
Lumen Technologies	Telecom operator peer	sells Edge computing; competes in Connectivity Solutions, Cybersecurity	structural	—
NTT DATA	Global systems integrator	sells Edge computing; competes in Connectivity Solutions	structural	—
Schneider Electric	Industrial / OT specialist	sells Edge computing	structural	—

HPE (Aruba, Athonet)	Network equipment vendor	sells Edge computing; competes in Connectivity Solutions — also an Orange partner	structural	—
Nokia	Network equipment vendor	sells Edge computing; competes in Connectivity Solutions	structural	—
Atos / Eviden	Global systems integrator	active in Defense; competes in Cybersecurity	structural	—

evidenced means this topic's own sources name the competitor — the signal ids are in the last column and are dated and clickable in the radar.

structural means the curated register says they sell this technology into this vertical, which is true but is not proof they are in this deal. Register version competitors-2026-08-a.

Competitor analysis

7 of 8 competitors on this space have been read from their own published pages; 1 could not be read and are marked below.

The shape of the field

The field for rad-hard FPGA-based edge computing in defense and space is contested by hyperscalers, telecom operators, systems integrators, and industrial specialists. Hyperscalers like AWS offer broad cloud and AI services but lack EU sovereignty certifications. Telecom peers like Deutsche Telekom and Lumen provide edge platforms and networking but may not have the specialized defense focus. Systems integrators like NTT DATA and Atos/Eviden bring mission-critical expertise and digital sovereignty, while industrial specialists like Schneider Electric focus on industrial edge. The gap lies in combining sovereign, certified infrastructure with owned network and field operations, which Orange is uniquely positioned to fill with its Private mobile networks, Orange Drone Guardian, and defense-specific expertise.

AWS Hyperscaler · also an Orange partner · evidenced presence

AWS presents itself as a comprehensive cloud and AI provider with a broad portfolio of services, solutions, and guidance for various industries and technical use cases. It targets organizations from startups to enterprises, offering pre-vetted architectures and partner solutions to accelerate cloud adoption and innovation.

Doing here: AWS offers over 240 cloud and AI services, including IoT solutions for connecting, ingesting, and analyzing device data with multi-layered security. It provides pre-vetted Solutions on AWS that combine cloud services, pre-built code, and configurations for specific industry or project needs, vetted by AWS architects for reliability, security, and cost-efficiency. AWS also offers industry-specific solutions for financial services, education, advertising, and energy, but its public pages do not specifically address rad-hard FPGA-based edge computing for satellite telemetry processing or secure command-and-control in defense and space critical infrastructure.

How Orange differentiates: Orange differentiates by offering sovereign, certified infrastructure (ISO 27001, SecNumCloud) that meets European defense and space requirements, whereas AWS's global cloud services may not align with EU sovereignty mandates. Orange's Private mobile networks and Orange Drone Guardian provide integrated, secure communication and monitoring capabilities for critical infrastructure, leveraging Orange's owned network and field operations. AWS's strength lies in its vast ecosystem and AI services, but for rad-hard FPGA edge computing in defense, Orange's defense and security experts and cybersecurity experts can deliver tailored, sovereign solutions that AWS cannot match due to its US-based infrastructure and lack of EU-specific certifications.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Cybersecurity experts

What they do better: AWS offers a broader range of cloud and AI services with deep integration and scalability, which can be advantageous for certain workloads.

Deutsche Telekom / T-Systems Telecom operator peer · structural presence

T-Systems, a subsidiary of Deutsche Telekom, presents itself as a provider of digital services for businesses and public institutions, with core competencies in cloud services, artificial intelligence, and security. It offers managed services for IT infrastructure, including edge computing, IoT, and cybersecurity solutions, and positions itself as a partner for digital transformation across industries.

Doing here: T-Systems offers an open-source-based edge computing platform called EdgAir for real-time data processing, with managed services and zero CAPEX. It provides access to Europe's first sovereign AI and high-performance platform, and offers cloud services with flexibility and sovereignty for hybrid and multi-cloud environments. T-Systems also provides OT security solutions, a drone detection system called Drone@Onsite for protecting critical infrastructure, and managed detection and response services with 24/7 threat protection.

How Orange differentiates: Orange differentiates by leveraging its own network infrastructure and field operations, combined with sovereign certifications (ISO 27001, SecNumCloud) and a dedicated defense vertical, to deliver integrated edge computing and secure command-and-control solutions. While T-Systems offers EdgAir and Drone@Onsite, Orange's Private mobile networks and Orange Drone Guardian provide a more comprehensive, end-to-end solution for defense and space critical infrastructure, backed by Orange Group researchers and defense and security experts. T-Systems' strength lies in its sovereign AI platform and OT security, but Orange's owned network and European footprint offer a distinct advantage for mission-critical, latency-sensitive applications.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Orange Group researchers

What they do better: T-Systems has a strong sovereign AI platform and a mature OT security portfolio, which are competitive in this space.

Lumen Technologies Telecom operator peer · structural presence

Lumen Technologies presents itself as a provider of secure networking, edge cloud, and AI-ready infrastructure, built on a global fiber network. It targets enterprises seeking to modernize their infrastructure, boost performance, and drive innovation, with a focus on supporting AI workloads and digital transformation.

Doing here: Lumen Technologies provides secure networking, edge cloud, and AI-ready infrastructure built on a global fiber network. It offers continuous threat detection and managed response to reduce DDoS attacks, and a centralized networking model that helps customers reduce telecom costs. Lumen positions itself as the enterprise-ready backbone of the AI economy, with on-demand networking and security solutions, but its public pages do not specifically address rad-hard FPGA-based edge computing for satellite telemetry or defense command-and-control.

How Orange differentiates: Orange differentiates by offering sovereign, certified infrastructure (ISO 27001, SecNumCloud) and a dedicated defense vertical with specialized expertise, whereas Lumen's edge cloud is more generic and lacks EU-specific sovereignty certifications. Orange's Private mobile networks and Orange Drone Guardian provide integrated, secure communication and monitoring for critical infrastructure, leveraging Orange's owned network and field operations. Lumen's strength lies in its global fiber network and cost-efficient networking, but for rad-hard FPGA edge computing in defense, Orange's defense and security experts and cybersecurity experts can deliver tailored, sovereign solutions that Lumen cannot match due to its lack of EU-specific certifications and defense focus.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Cybersecurity experts

What they do better: Lumen has a vast global fiber network and strong networking capabilities, which are valuable for connectivity-centric solutions.

NTT DATA Global systems integrator · structural presence

NTT DATA presents itself as a global systems integrator and IT services provider, offering end-to-end consulting, technology, and managed services across infrastructure, AI, data, and sustainability. It targets large enterprises and public sector organizations, emphasizing AI-driven modernization and global delivery.

Doing here: NTT DATA provides full-stack infrastructure solutions and services, including secure networking, cybersecurity, hybrid data center, and digital workplace solutions. It offers AI-native solutions and specialized agents that automate and orchestrate business processes end-to-end, and provides infrastructure advisory services to help CIOs turn business and AI ambitions into technology roadmaps. NTT DATA also delivers secure networking solutions across campus, WAN, and cloud networks, and hybrid data center solutions that modernize on-premises environments for AI workloads, including private and sovereign AI infrastructure.

How Orange differentiates: Orange differentiates by combining its owned network infrastructure and field operations with sovereign certifications (ISO 27001, SecNumCloud) and a dedicated defense vertical, offering integrated edge computing and secure command-and-control solutions. While NTT DATA provides comprehensive IT services and sovereign AI infrastructure, Orange's Private mobile networks and Orange Drone Guardian are tailored for defense and space critical infrastructure, backed by Orange Group researchers and defense and security experts. NTT DATA's strength lies in its global delivery and AI-native solutions, but Orange's network ownership and European sovereignty focus provide a structural advantage for mission-critical, latency-sensitive applications.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Orange Group researchers

What they do better: NTT DATA has a strong global delivery model and AI-native solutions, which are competitive for large-scale IT transformations.

Schneider Electric Industrial / OT specialist · structural presence

Schneider Electric presents itself as a global energy technology partner that electrifies, automates, and digitalizes industries, businesses, and homes, driving efficiency and sustainability. It offers a broad portfolio of hardware, software, and services across energy management, industrial automation, and data center infrastructure, targeting sectors from life sciences to logistics.

Doing here: Schneider Electric provides industrial edge computing solutions for logistics, including software, hardware, and services for automated warehouses. It offers a portfolio of software solutions for consulting engineers, and provides complete data center solutions in partnership with Hewlett Packard Enterprise to deliver private cloud solutions supporting sustainability and security. Schneider also offers EcoStruxure IT software portfolio for data center infrastructure management, and energy efficiency solutions for various industries, but its public pages do not specifically address rad-hard FPGA-based edge computing for satellite telemetry or defense command-and-control.

How Orange differentiates: Orange differentiates by offering sovereign, certified infrastructure (ISO 27001, SecNumCloud) and a dedicated defense vertical with specialized expertise, whereas Schneider Electric focuses on industrial edge computing for logistics and energy management. Orange's Private mobile networks and Orange Drone Guardian provide integrated, secure communication and monitoring for critical infrastructure, leveraging Orange's owned network and field operations. Schneider's strength lies in its industrial automation and energy management, but for rad-hard FPGA edge computing in defense, Orange's defense and security experts and cybersecurity experts can deliver tailored, sovereign solutions that Schneider cannot match due to its lack of EU-specific certifications and defense focus.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Cybersecurity experts

What they do better: Schneider Electric has deep expertise in industrial automation and energy management, which is relevant for certain edge computing applications.

HPE (Aruba, Athonet) Network equipment vendor · also an Orange partner · structural presence

Their published position is unread — read timeout from this network. Nothing below is inferred on their behalf.

Doing here: HPE's published position is unread due to a network timeout, so no activity can be cited.

How Orange differentiates: Orange differentiates by offering sovereign, certified infrastructure (ISO 27001, SecNumCloud) and a dedicated defense vertical with specialized expertise, whereas HPE's position in this space is unread and thus cannot be compared. Orange's Private mobile networks and Orange Drone Guardian provide integrated, secure communication and monitoring for critical infrastructure, leveraging Orange's owned network and field operations. Without HPE's published position, Orange would compete on its structural advantages in network ownership and EU sovereignty, but must be prepared to address HPE's potential strengths in edge computing hardware and partnerships.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts

What they do better: HPE has a strong portfolio in edge computing hardware and partnerships, which could be competitive if their position were readable.

Nokia Network equipment vendor · structural presence

Nokia presents itself as a provider of network infrastructure and solutions for telecommunications providers, enterprises, and public sector organizations, with a focus on AI-powered networks, optical and IP connectivity, and mission-critical communications. It also offers defense-specific tactical communication products and services, as well as research and consulting through Nokia Bell Labs.

Doing here: Nokia offers a tactical communications portfolio for defense, including Banshee tactical radios, Mission-Safe Phone, and biometric monitoring systems for real-time situational awareness. It provides quantum-safe network solutions for defense to protect data from quantum computing threats, and offers subsea network solutions for high-capacity optical transport. Nokia also provides AI-powered network management and orchestration through the MantaRay SMO platform, and energy solutions for radio sites, but its public pages do not specifically address rad-hard FPGA-based edge computing for satellite telemetry processing.

How Orange differentiates: Orange differentiates by offering sovereign, certified infrastructure (ISO 27001, SecNumCloud) and a dedicated defense vertical with specialized expertise, whereas Nokia focuses on tactical communications and network infrastructure. Orange's Private mobile networks and Orange Drone Guardian provide integrated, secure communication and monitoring for critical infrastructure, leveraging Orange's owned network and field operations. Nokia's strength lies in its tactical radios and quantum-safe solutions, but for rad-hard FPGA edge computing in defense, Orange's defense and security experts and cybersecurity experts can deliver tailored, sovereign solutions that Nokia cannot match due to its lack of EU-specific certifications and end-to-end service integration.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Cybersecurity experts

What they do better: Nokia has a strong portfolio in tactical communications and quantum-safe networking, which are relevant for defense applications.

Atos / Eviden Global systems integrator · structural presence

Eviden, the product division of Atos Group, presents itself as a provider of mission-critical systems, sovereign cybersecurity products, and AI-powered video analytics for public and private organizations. It emphasizes securing people, data, and critical infrastructure across digital and physical domains, with a focus on digital sovereignty and resilience.

Doing here: Eviden delivers mission-critical communication solutions including private 4G LTE/5G networks for governments, defense, and offshore wind. It provides mission-critical systems for defense, including battle management systems like SICS and D-BMS, and offers highly certified software and hardware cybersecurity products for data protection, access management, and identity security. Eviden also provides a Digital Sovereignty offering, post-quantum cryptography solutions, satellite monitoring solutions with AI, big data, and cloud integration, and network encryption solutions certified Common Criteria EAL4+ and ANSSI QS.

How Orange differentiates: Orange differentiates by leveraging its owned network infrastructure and field operations, combined with sovereign certifications (ISO 27001, SecNumCloud) and a dedicated defense vertical, to deliver integrated edge computing and secure command-and-control solutions. While Eviden offers mission-critical systems and digital sovereignty, Orange's Private mobile networks and Orange Drone Guardian are tailored for defense and space critical infrastructure, backed by Orange Group researchers and defense and security experts. Eviden's strength lies in its battle management systems and certified cybersecurity products, but Orange's network ownership and European sovereignty focus provide a structural advantage for mission-critical, latency-sensitive applications.

Anchored on: ISO 27001 · SecNumCloud · Private mobile networks · Orange Drone Guardian · Defense and security experts · Orange Group researchers

What they do better: Eviden has strong mission-critical systems and certified cybersecurity products, which are competitive in defense and space sectors.

Qualifying questions for the first meeting

- 1 What is your current satellite telemetry processing architecture, and where are the latency bottlenecks?
- 2 Have you experienced any security incidents or near-misses in your command-and-control links?
- 3 What are your certification requirements for edge computing systems in defense or space?
- 4 Are you currently exploring on-orbit processing or ground-based edge for your satellite constellation?
- 5 Who is your primary systems integrator for ground segment upgrades, and how do you evaluate new vendors?
- 6 What is your timeline for modernizing your satellite ground infrastructure?

Objections you will meet

They will say	You can answer
We already have a preferred supplier for space-grade electronics.	That's understandable, and we're not trying to replace your existing supplier. We're offering a complementary layer of secure connectivity and cybersecurity that wraps around your hardware, ensuring end-to-end protection and compliance.
Edge computing in space is too risky and unproven.	You're right that on-orbit edge is still emerging, but ground-based edge for telemetry processing is proven. We can start with a ground-based deployment to reduce latency and improve security, and then evolve to on-orbit as the technology matures.
Why not just use a hyperscaler like AWS?	AWS offers strong edge capabilities, but for defense and space, sovereignty and security are paramount. Our SecNumCloud certification and European-based expertise give you the assurance that your data stays within trusted boundaries.

Risks and unknowns

The main risk is that the customer may prefer a specialist rad-hard FPGA vendor or a hyperscaler with a more mature edge ecosystem. There is also uncertainty about the regulatory landscape for space-based edge computing and the actual demand for on-orbit processing versus ground-based solutions. Additionally, Orange's lack of in-house rad-hard FPGA expertise could be a significant gap.

Next action, by role (FR-17)

Role	Do this next
Presales / Proposal	Bid brief: prepare a differentiated response for a defense RFP on satellite edge computing by combining Orange Drone Guardian and Private mobile networks with NVIDIA, Dell, and HPE partner capabilities, emphasizing secure data handling and compliance.
Sales	In a conversation with a defense prime's satellite program director, say: 'Given the EU's focus on critical infrastructure resilience, how are you addressing secure edge processing for satellite telemetry? Orange's cybersecurity and IoT expertise, backed by ISO 27001 and SecNumCloud, could complement your rad-hard approach.'
Strategist / Innovator	Deep-dive brief: map the EU-funded edge-computing-for-critical-infrastructure project's security requirements against Orange's ISO 27001 and SecNumCloud certifications to identify a defensible positioning for defense and space clients.

Evidence

Every claim in this brief resolves to one of these. Tier 1 is an authoritative primary source; tier 4 is vendor-published material, discounted in scoring (§4.3.7).

How this brief was made

Computed, not written. Attractiveness, right to win, competitive intensity and every figure in the market-opportunity section are computed from stored inputs and can be re-derived (DR-05, NFR-01). No language model produced a number anywhere in this document (§4.4.4).

Written, then checked. The narrative sections and the solution diagram were generated from this topic's evidence and from the named asset and competitor lists. Factual sections must cite signal ids attached to this topic; sections that failed that check, or that contained a generated quantity or an unsupplied organisation, were removed rather than rewritten.

Removed by those checks in this brief: diagram (1 box(es) claimed to be an Orange asset that was not supplied — shown as third-party instead)
